

ComLink CGW1 Controller/1ch Gateway Package

Introducing the ComLink CGW1. The CGW1 combines all the great features of the TL-NET LTR and Conventional Controller with a one audio channel TL-NET Gateway. We have combined these two great products into a space saving 1U chassis.

Easily interfaces to any repeater on the market!

KEY FEATURES of TL-NET Controller:

- 250 group IDs per controller, or up to three conventional tones
- Program and test all parameters from the innovative Windows® based Control Manager software
- Air time logging and real-time system monitoring
- ID validation. If group ID is invalid, handshake will not complete
- Built-in CWID
- Remote programming/maintenance via DTMF
- Easily connect to the TL-NET system to create a wide area network

TL-NET One Channel Gateway:

- Offers rugged power with 120 VAC operation in a 1U 19" rack mount
- Each unit includes a cooling fan, network connections, and an easy web-based user interface
- Each site requires a high-speed internet connection which can be a T1, cable modem, DSL, or cellular air card
